RE: Lela Dibruno  
DOB: 11/19/38  
SSN: 244-54-1081

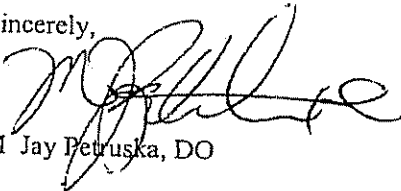

To Whom It May Concern:

Ms. Dibruno is a 66-year-old, white female who is a patient at CaroMont Family Medicine in Belmont, North Carolina. She suffers from numerous medical problems including mitral valve prolapse, estrogen replacement therapy, hypercholesterolemia, urinary incontinence, hypothyroidism, diverticulosis, hypertension, gastroesophageal reflux disease and allergic rhinitis. She also has a large midline abdominal wall hernia that causes a lot of pain and discomfort. Due to her health problems she is unable to sit for prolonged periods of time or travel long distances in the car or in a plane. She is scheduled to have surgery on July 26 of this year to have the hernia repaired because it is causing a lot of pain and discomfort for her.

Please take this into consideration when considering her case and it is not recommended that she travel long distances by car, plane or any mode of transportation that would require her to be seated for prolonged periods of time.

If I can be of any further assistance, please do not hesitate to ask.

Sincerely,

M Jay Petruska, DO
